
Insight Architect - Customize Insight Screen

Overview

Extensions of insight screens in applications enables user to shape their experience to their specific needs. This screen enables the user to create a custom version of the base screen in the application.

- users can adjust the layout to better their workflow.
- deactivate or delete these extend screens ensures that the application remains organized.

Customizing a Base Insight Screen

Create a custom screen from the base screen in the application. Follow the steps

- Navigate to **SCALE Extend>> Insight Architect** to view the **Customize Insight Screen**.
- Click Create New to select a base screen to customize.
- Select the screen from the grid and click **Create Custom**.
 - Users can use the **Is Customized?** column to filter whether the selected base screen is customized or not.

When a base insight screen is customized, the system performs the following

- A new custom insight screen with new form id is created.
- This new custom screen is activated.
- The existing base screen by default will be deactivated.

Edit a Custom Insight Screen

Follow the steps

- Click **View All**, to list all the customized screens.
- Select the custom screen and Click **Edit**.
- The custom **Form** for the insight screen is displayed. You can modify the screen as required.

Activating/Deactivating a customized Insight screen

The Activate and Deactivate buttons enable users to activate and deactivate custom screens.

Activating a custom screen will automatically disable the corresponding base insight screen. For instance, the base Receipt Insight screen will be disabled if you activate a custom Receipt Insight screen. Similarly deactivating will function vice verse.

Delete a customized Insight Screen

Users can delete the custom screens from the application database.

When a customer screen is deleted, the system performs the following

- The configuration records in the database related to the custom screen is deleted.
- The related base insight screen is activated.

Publish a Customized Insight Screen

The customized insight screen can be published from the Stage to Production.

- Click **View All**, to list all the customized screens.
- Select the custom screen. Click **Publish**.
- System will publish the custom screen to production.

Note: This is for Manhattan Active SCALE users only.
